Elec 2 Mobile Application Development 2 Final Project

Android Mobile App Development Final Project

Name: Maurik Angelo L. Fernandez

Application Name

HanapTubig

Rationale

Many residents in the Philippines struggle to find nearby water refill stations when they need clean drinking water. HanapTubig aims to help users quickly locate the nearest water refill stations using a map-based guide, promoting better access to safe and affordable drinking water.

Features

1. Display nearby water refill stations on a map
2. Show basic information for each station (name, contact number, operating hours)
3. Allow users to report if a station is closed or not operating

Target Users

1. Residents who regularly buy refilled drinking water
2. Delivery riders who need to locate water stations for orders
3. People traveling or moving to unfamiliar areas needing drinking water sources

Importance and Novelty of Application

HanapTubig helps users easily find water refill stations to encourage safe and eco-friendly drinking water habits. By offering a simple map with refill station locations and details, it improves convenience and supports public health in both urban and rural areas.
